

Why would I take the red pill and not the blue pill?

Answer:

We live in a world where all the answers are readily available to us. There already exists a million answers to our questions. The real competition is how to stand out. The blue-pill offers monotony and lack of curiosity, whereas red pill provides a platform for inquisitiveness and showcases the mettle required to make the hard choices.

In the movie Matrix, the pills are the choice between continuing to accept the illusion as reality or willing to give up everything you know to uncover the truth. "A mind stretched by a new experience can never go back to its old dimensions". Every experience changes you, and only in a dynamic world can you develop such different perspectives.

Knowledge is born out of a thirst to learn. I personally do not believe that growth comes from monotonous learning. I believe that learning new things, keeping in pace with the changing environment and discovering creative ideas and staying unique is what makes a person different. I also believe that things cannot be bettered when one does not deal with the harsh realities that they come with. Taking

the red pill is self-growth and while they come with growing pains, they are essential in shaping us as a person.

Curiosity is the building block of an engineer. To make creative and efficient solutions for already existing problems, one needs to think outside of the constraints they are presented with. To formulate the solution to a problem, the whole picture needs to be visualised. This is only possible with the red pill. Hence I would take the red pill over the blue pill.
